Configuration and administration

File .env

Watch a tutorial (english subs):

Subsystem configuration is done by editing the .env file

```
/var/www/html/dpiui2/backed/.env
```

The file has the following content:

```
#System settings. It should remain unchanged.  
APP_ENV=local  
APP_DEBUG=true  
APP_KEY=  
APP_TIMEZONE=UTC  
  
#Application URL. It is needed to form the correct link when sending QoE  
reports to e-mail  
APP_URL=https://localhost/  
  
#System settings regarding connection to the MySQL DB, it should remain  
unchanged  
DB_CONNECTION=mysql  
DB_HOST=localhost  
DB_PORT=3306  
DB_DATABASE=dpiui2  
DB_USERNAME=root  
DB_PASSWORD=vasexperts  
  
#Settings regarding connection to the SMTP server. They are needed to send  
email notifications.  
CFG_SMTP_UNAME=dpiuitest@gmail.com
```

```
CFG_SMTP_PW=dpuiitestdpuiitest
CFG_SMTP_HOST=smtp.gmail.com
CFG_SMTP_PORT=587
#tls or ssl
CFG_SMTP_SECURE=tls

#Technical support address
CFG_SEND_ERROR_EMAIL=sd@vas.expert
#Address for sending of email copies
CFG_SEND_COPY_EMAIL=

#System settings, prohibited from changing
CACHE_DRIVER=file
QUEUE_DRIVER=database
SESSION_DRIVER=cookie

#Settings regarding connection to QoE Stor
QOESTOR_DB_HOST=localhost
QOESTOR_DB_PORT=8123
QOESTOR_DB_USER=default
QOESTOR_DB_PASS=vasexperts
QOESTOR_DB_NAME=qoestor
QOESTOR_CACHE_LIFE_TIME_SEC=3600
QOESTOR_MAIN_LOG_PARTITIONS_LIFE_TIME_HOUR=24
QOESTOR_AGG_LOG_PARTITIONS_LIFE_TIME_DAYS=15

#Subscriber synchronization period in minutes (for the Subscribers and
Services and Advertising sections)
SM_SUBSCRIBERS_UPDATE_PERIOD_MINUTES=30

#Data cleanup period for charts in the Performance Section
CHART_DATA_DELETE_DAYS_INTERVAL=60

#CG-NAT profile and statistics synchronization period
CG_NAT_SYNC_MINUTES_INTERVAL=5

#Хост Vas Cloud
VAS_CLOUD_HOST=5.200.37.122
```

If changes to .env have been made, you should run the following command: `dpui2 queue:restart`
If the command is not found restart the ssh session in the terminal.

Equipment connection

Sudo user

The equipment is connected and controlled using the SSH protocol. Connection must be done under a user with sudo privileges, or under the root user **(not recommended)**.

Watch a tutorial on connecting to DPI (english subs):

Video

A new user should be created with sudo access granted on the connected equipment.

Let's consider dpisu user creating as an example:

1. Create the dpisu user

```
adduser dpisu  
passwd dpisu
```

2. Add to the /etc/sudoers.d/dpisu file the following stuff

```
Defaults:dpisu !requiretty  
Defaults secure_path =  
/usr/local/sbin:/usr/local/bin:/sbin:/bin:/usr/sbin:/usr/bin:/root/bin  
dpisu    ALL=(ALL)        NOPASSWD: ALL
```

By doing this, you disable the dpisu user requirement for a password and the requiretty requirement when switching to sudo mode.

3. Disable the requiretty requirement in the file /etc/sudoers

```
sed -i "s/^.*requiretty/#Defaults requiretty/" /etc/sudoers
```
