## Data export

If necessary, you can independently generate your own reports without additional tools and upload data in any CSV, JSON, TabSeparated format.

Data is stored in 4 main logs

- qoestor.fullflow - full netflow log, storage period - 2 hours by default
- qoestor.clicksteam - full clickstream log, storage period - 2 hours by default
- qoestor.fullflow\_agg - pre-aggregated netflow log, storage period - 14 days by default
- qoestor.clicksteam\_agg - pre-aggregated clickstream log, storage period - 14 days by default

The command format is as follows

```
clickhouse-client --database=qoestor --query="Your sql is here"
```

By default data is uploaded in TabSeparated format.

**Example.** The client asked for a log of connections to a specific host in CSV format

```
clickhouse-client --database=qoestor --query="select * from fullflow
prewhere flow_start_date = '2018-10-04' where (source_ipv4 = '10.64.66.100'
or destination_ipv4 = '10.64.66.100') and host = 'google.com' ORDER BY
flow_start_time limit 10 format CSV"
```
