Uninstall (complete removal)

Attention! Uninstalling will completely delete your data!

In some cases, you need to completely remove QoE Stor (for example, if the product was installed on a test DPI or on another server by mistake).

For complete removal, run the uninstall script [fastor-rpm_uninstall.sh](#).

```
source <(curl https://vasexperts.ru/install/fastor-rpm_uninstall.sh)
```

Packages will be removed: ipfixreceiver, clickhouse, fastor. And also the data will be completely deleted.
