PCRF Proxy	3
------------------	---

PCRF Proxy

PCRF Proxy is a solution that implements point network management based on the lists of LAC and TAC base stations of the operator. PCRF Proxy is built into the Gx interface gap between PCEF and PCRF as a transparent proxy – with no changes to the existing infrastructure.

Features:

- Zone isolation by LAC/TAC/CID and other identifiers;
- Implements a white list: access to banks, state portals, emergency services without restrictions;
- It works as a transparent proxy, while PCEF and PCRF work normally, do not notice changes and do not require revision.
